FBA Inbound Eligibility API User Guide

Contents

What is the FBA Inbound Eligibility API?

With the FBA Inbound Eligibility API, you can build applications that let sellers get eligibility previews for items before shipping them to Amazon's fulfillment centers. With this API you can find out if an item is eligible for inbound shipment to Amazon's fulfillment centers in a specific marketplace. You can also find out if an item is eligible for using the manufacturer barcode for FBA inventory tracking. Sellers can use this information to inform their decisions about which items to ship Amazon's fulfillment centers.

Tutorial: Find out if an item is eligible for inbound shipment to Amazon's fulfillment centers

This tutorial shows you how to find out if an item is eligible for inbound shipment to Amazon's fulfillment centers in a specific marketplace. This information can help sellers avoid adding ineligible items to inbound shipments.

Prerequisites

To complete this tutorial you will need:

- Authorization from the seller for whom you are making calls. See Selling Partner API Beta Developer Guide for more information.

To find out if an item is eligible for inbound shipment

1. Call the **getItemEligibilityPreview** operation, passing the following query parameters:

Parameter	Values	Required
marketplaceIds	Specify the marketplace in which you want to determine the item's eligibility. Type: string	Yes. Required for eligibility previews when **program**=*INBOUND*.
asin	Specify the ASIN of the item for which you want an eligibility preview. Type: string	Yes
program	Specify **program**=*INBOUND* to indicate that you want to preview an item's eligibility for inbound shipment. Type: string	Yes

Request example:

```
GET https://sellingpartnerapi-
na.amazon.com/fba/inbound/v1/eligibility/itemPreview?marketplaceI
ds=marketplaceIdExample&asin=asinExample&program=INBOUND
```

Response

A successful response includes the following objects:

Name	Description	Required	Values
asin	The ASIN for which eligibility was determined.	Yes	Type: string
marketplaceId	The marketplace for which eligibility was determined.	Yes. Required for eligibility previews when **program**=*INBOUND*.	Type: string
program	The program for which item eligibility was determined. Must be **program**=*INBOUND*.	Yes	Type: string
isEligibleForProgram	Indicates if the item is eligible for inbound shipment to Amazon fulfillment centers in the specified marketplace.	Yes	If *True*, the item is eligible. Type: boolean
ineligibilityReasonList	A list of reason codes that indicate why the item is ineligible.	No. Only included if **isEligibleForProgram**=*False*	Type: List of string

Response example (for an item that is eligible):

```
{
  "payload":{
    "asin": "asinExample",
    "marketplaceId": "marketplaceIdExample",
    "program": "INBOUND",
    "isEligibleForProgram": true
  }
}
```

Response example (for an item that is ineligible):

```
{
  "payload":{
    "asin": "asinExample",
    "marketplaceId": "marketplaceIdExample",
    "program": "INBOUND",
    "isEligibleForProgram": false,
    "ineligibilityReasonList": ["FBA_INB_0004","FBA_INB_0005"]
  }
}
```

Tutorial: Find out if an item is eligible for using the manufacturer barcode for FBA inventory tracking

This tutorial shows you how to find out if an item is eligible for using the manufacturer barcode for FBA inventory tracking. This information can help sellers understand the barcode requirements for items that they want to ship to Amazon's fulfillment centers.

Prerequisites

To complete this tutorial you will need:

- Authorization from the seller for whom you are making calls. See Selling Partner API Beta Developer Guide for more information.

To find out if an item is eligible for using the manufacturer barcode for FBA inventory tracking

1. Call the **getItemEligibilityPreview** operation, passing the following query parameters:

Parameter	Values	Required
asin	Specify the ASIN of the item for which you want an eligibility preview. Type: string	Yes
program	Specify **program**=*COMMINGLING* to indicate that you want to preview an item's eligibility for using the manufacturer barcode for FBA inventory tracking Type: string	Yes

Request example:

```
GET https://sellingpartnerapi-
na.amazon.com/fba/inbound/v1/eligibility/itemPreview?
&asin=asinExample&program=COMMINGLING
```

Response

A successful response includes the following objects:

Name	Description	Required	Values
asin	The ASIN for which eligibility was determined.	Yes	Type: string
program	The program for which item eligibility was determined. Must be **program**=*COMMINGLING*.	Yes	Type: string
isEligibleForProgram	Indicates if the item is eligible for using the manufacturer barcode for FBA inventory tracking.	Yes	If *True*, the item is eligible. Type: boolean
ineligibilityReasonList	A list of reason codes that indicate why the item is ineligible.	No. Only included if **isEligibleForProgram**=*False*	Type: List of string

Response example (for an item that is eligible):

```
{
  "payload":{

    "asin": "asinExample",

    "program": "COMMINGLING",

    "isEligibleForProgram": true

  }
}
```

Response example (for an item that is ineligible):

```
{
  "payload":{

    "asin": "asinExample",

    "program": "COMMINGLING",

    "isEligibleForProgram": false,

    "ineligibilityReasonList": ["FBA_INB_0065"]

  }
}
```
